## ENGELSMANN // NEWS

Dear readers,

In this year's first issue of "Engelsmann **News**", you can expect to find information about three red-hot highlights coming from Engelsmann in 2019:

First, we want to give you a taster of what we have planned for Powtech 2019, where we will be presenting our new machines in the hygienic design for the very first time. You can also find out more about what distinguishes rectangular screening machines in hygienic design from other screening machines. If you're more interested in learning about what else we're working on, you should definitely check out our new case study archive, which contains the most exciting practical examples from the world of bulk solid systems.

We wish you happy reading.

Your Engelsmann team

## POWTECH 2019: Hygienic Design Made by Engelsmann

With no corners or edges – the new hygienic machine variants from Engelsmann. Designed after the basic principles of hygienic design, they are optimally tailored to meet the high requirements of hygiene-sensitive areas of application.

The newly redesigned machines from the big bag handling, screening and mixing technology sectors will be presented to the public for the very first time at POWTECH 2019. As a reader of our newsletter, you have already had the opportunity to take an exclusive glimpse behind the scenes to learn more about the new hygiene features.

## Germ-Free Production in a Rectangle

When it comes to hygienic screening solutions, round screening machines are often the first choice. But if they have an intelligent design, rectangular screening machines can also be used in hygiene-sensitive applications without any problems and they also offer certain advantages that most round screening machines cannot match.

Do you want to know how rectangular screening machines in hygienic design are made in more detail? And what the resulting benefits are, for example, when it comes to handling the machine? You can find the answers to these questions, as well as much more additional information, in our latest case study.

## Your Benchmark for a Suitable System Selection

Do you deal with complex tasks and work with more than one component?

For many years, Engelsmann has also designed entire system units in the areas of screening, mixing, filling, emptying, conveying and dosing, that are tailored to customer's individual needs.

We have selected the most exciting practical examples from the world of bulk solid systems and have compiled them in a compact way for you. Take a look at our new case study archive – you'll be sure to find an application example that is relevant for you!
