## ENGELSMANN // NEWS

Dear readers,

On the 28<sup>th</sup> of September, the POWTECH trade fair saw its last day and our team at the fair could look back on their success. You can find all the details in the November edition of “Engelsmann **News**”. For those of you who could not visit POWTECH, we have a tip on how you can see our new screening machine JEL Phoenix as good as live. Last but not least, a recent user report from the feed industry shows how animal feed can be freed from dust.

We hope you enjoy reading.

Your Engelsmann team

## POWTECH 2017 Draws a Record Number of Visitors

Despite being more international as ever before, the number of visitors is in decline - that was the bottom line for the organisers of the POWTECH 2017.

The newly designed Engelsmann booth showed no signs of this trend. In fact, the exact opposite was true: Thanks to the large number of customers and curious visitors, the Engelsmann trade fair team drew in a record number of visitors. It was all hands on deck at the busy event.

We would like to take this opportunity to thank all those who visited our booth for the numerous interesting discussions and we look forward to seeing you again soon - at the latest at SOLIDS in Dortmund in November 2018.

## Even Animals Prefer it Dust-Free

A recent user report from the feed industry shows how special screening applications help ensure an optimal product quality for products accumulating dust. Around 80% of all mixed feed are in demand in pellet form. A low dust content in the product is one of the most important quality characteristics for this type of dry feed.

You can find information on how an optimal dedusting is made possible and which aspects of the selection of a suitable screening processes play a role in a user report.
