ENGELSMANN // NEWS

Dear readers,

In the latest edition of “Engelsmann *News*”, it’s all about extraordinary screens: alongside screening machines with a distinctive protectiveness that protect the processes and the plant as well as the end product, we report on a recently developed type of screen whose strengths are in screening delicate bulk solids. A current project that shows how some screens can save lives particularly captured our hearts.

Screens for a Good Cause

A current project, in which Engelsmann is supporting the International Water Aid Organisation (IWAO) and the Mannheim University of Applied Sciences, has proved that screens can save lives. The shared aim: the production of an emergency water tank which should enable natural disaster victims to access uncontaminated water for the first three days. The Engelsmann team is delighted to have contributed to constructing the prototype of this important project.

For more information on the prototype launch and how it works, click on Info.

Trust is Good – Protective Screening is Better

Protective screens are among the smaller plant components in production. Their usefulness is all the greater: their use protects production processes as well as end products from contaminants and impurities. Consequently, protective screens contribute an important part in quality assurance.

You can find out when and where the use of a protective screen is particularly profitable, and what you should look out for when buying a new protective screening machine in the new guidebook from our screen technology experts.

A New Type of Screen for Delicate Products

Have you ever tried crossing a centrifugal screen with a screw conveyor? We have, and the result is really something: the resulting coil drum screening machine combines the high accuracy of a centrifugal screening machine with the careful product treatment of a screw and is therefore best suited for screening easily breakable products and coated products.

You should not miss out on the detailed information on the range of applications, the functionality, and the benefits that our new type of screen has to offer.
