September // 2022

Dear Reader,

have you noticed it yet? Engelsmann has a **new homepage**. Here you will find all the essential information you need, clearly presented - about our machines and systems, but also about us as a company and employer. We hope you like it!

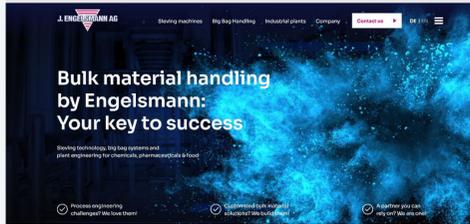

Beyond isolators or full protective suits: Engelsmann now has the solution for anyone looking for more economy, safety and efficiency when screening in containment areas: the new **JEL Konti II CTM containment screening machine** for screening processes up to OEB 4.

And preparations for **POWTECH 2022** in Nuremberg are in full swing! You will find us in **hall 3A, booth 216**. For our exhibition highlights and your free exhibition ticket, please [click here](#).

Your Engelsmann Team

Our new website is online!

In almost 150 years of bulk materials handling history, we have already mastered so many process engineering challenges together with our customers that we would like to share these experiences with you on our new website.

We don't want to give too much away at this moment and invite you to discover the new Engelsmann website. We look forward to your visit, as usual at www.engelsmann.de/en.

New containment screening machine JEL Konti II CTM: Screening up to OEB 4

Highly active ingredients or toxic chemicals have such a high hazard potential that they can often only be processed under containment conditions. And it is not uncommon for these products to be screened. Protective screening, oversize and fine grain separation or classification screening are also common in these applications.

"With the development of the **JEL Konti II CTM**, we are expanding our containment programme to include the important field of screening technology," says Christian Kretzu, technical director at Engelsmann. "After the development of the **SmartCon series**, with which we offer containment solutions for emptying and filling of big bags, this was the next logical step for us."

The newly developed containment screen **JEL Konti II CTM** can be used for a variety of different products and screening tasks. The complete screening process, including screen insert change, can be carried out without breaking the containment.

The allround-vibrating screen **JEL Konti II** served as the basis for the development. This Engelsmann classic was adapted with only a few add-on components so that it can be used for containment areas up to OEB 4. Even in the standard version, the **JEL Konti II** has the advantage that the screen insert can be pulled out of the front of the machine like a drawer, without the need to dismantle the screen or decouple it from the product flow. This design makes it much easier to maintain the containment when changing the insert, it saves time and minimizes plant downtime.

The **JEL Konti II CTM** is designed as a single-use solution and works with foil bags that are simply docked dust-tight by the operator to the screen insert opening in the screen trough. With the help of foil bags, contaminated screen inserts can be removed and new inserts can be installed safely.

For more information about the new JEL Konti II CTM, [click here](#). Do you have any questions or need advice? Our experts are there for you!

Our trade fair highlights for POWTECH

27- 29 September 2022 // Nuremberg

At POWTECH, we will be present our new containment screening machine **JEL Konti II CTM** for the first time, which can be used for almost all common screening tasks in containment zones up to OEB 4. Our **JEL SmartCon ES** connection system for big bag emptying with containment will also be there and can be tried out. And we have our popular **JEL RRM** mixer in our luggage - a drum hoop mixer for mixing small quantities in drums.

You would like to meet the Engelsmann team?
We invite you!

Secure your exhibition ticket and simply write to: neumann@engelsmann.de. We will send you the registration link that will take you directly to your free POWTECH ticket.

Your topics are our topics!

Do you have any questions or suggestions? Give it to us!

We will prepare your suggestions regarding bulk solids topics for you in one of the upcoming newsletter articles - of course anonymously.

We look forward to your ideas! Write us and actively help to shape the content of the Engelsmann newsletter! Simply send your suggestions for topics to:
neumann@engelsmann.de
